Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102 and 103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over DE 2846744.

The DE reference shows a rotatable cutting tool comprising a cutting bit insert comprising an insert body having a conical tip (21) and an inner flat end (7); and an inner tiered protrusion (11) integrally formed on the inner flat end; a tool body having an outer end and a tiered recess (6) defined in the outer end of the tool body to firmly hold the inner tiered protrusion and the inner flat end of the insert. The English language abstract of the DE reference is silent regarding the resilient retainer; however the groove shown near the bottom of figure 1 is clearly for a resilient retainer, as is common in such tools. Alternatively, if it is deemed that the DE reference does not anticipate the resilient retainer it would have been obvious to one of ordinary skill in the art at the time

Art Unit: 3673

of the invention to have used a resilient retainer with the tool body as called for in claim 1, in order to hold it in the tool holder.

With regards to claim 2: the DE reference shows a proximal tier (generally shown near 4 in figure 2) and a distal tier (generally near 17); wherein the proximal tier, distal tier, and flat end are welded in the recess in the tool body.

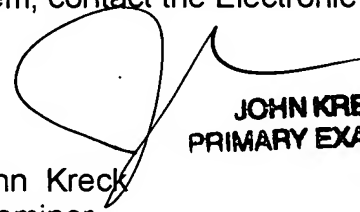

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kammerer (U.S. Patent number 6,428,111); Tomlinson (U.S. Patent number 4,836,178); and Levankovskii, et al. (U.S. Patent number 5,702,160) teach similar inserts. Olmstead, et al. (U.S. Patent number 5,472,376) teaches the advantages of a similar insert having cylindrical tiered protrusions, each of which is protruded from a flat end of the previous protrusion in a manner similar to shown by applicant's figures.
